

## FAST FACTS: 2D DESIGN DRAFTSIGHT®

Designers and engineers around the world rely on DraftSight for best-in-class 2D design. DraftSight makes it easy to be productive with powerful time-saving functionalities, an API to accelerate your design projects, and seamless compatibility with SOLIDWORKS. Here's what you can expect when designing with DraftSight:

- 1 Best-in-class 2D CAD Solution:** For over a decade, millions of designers have trusted DraftSight's proven desktop 2D CAD with the productivity tools, functionality, and file compatibility you need to create, edit, view, and mark up any kind of DWG file quickly and efficiently. DraftSight provides comparable, if not greater capabilities than alternative CAD products with the flexibility of network licensing and support for organizations.
- 2 Maximize your investment and increase ROI:** DraftSight helps free up your IT budget for innovation. You'll be able to expand team access to CAD by being able to purchase more 2D seats with lighter hardware requirements or network licenses. With DraftSight, you can increase ROI without sacrificing quality or productivity.
- 3 Easy to use and get started:** One of the biggest requirements in considering a new CAD product is maintaining productivity. DraftSight makes it easy to create, edit, view and mark up any DWG-file with speed and efficiency. Its familiar user interface and common commands enables your team to be acclimated in hours, not days. Your existing Dynamic Blocks, customizations, keyboard shortcuts, LISP routines and Script files will all work just fine.
- 4 Seamless Compatibility and Integrations:** DraftSight integrates seamlessly with other SOLIDWORKS and Dassault Systèmes solutions and services. Many SOLIDWORKS customers appreciate DraftSight's compatibility with the SOLIDWORKS design environment.
- 5 Scalable and Ready for the Future:** 3DEXPERIENCE DraftSight connects your preferred 2D CAD solution to the cloud for access to new design and data management capabilities. By integrating with the 3DEXPERIENCE platform, it helps overcome common design and business challenges—drawing signoff, approvals, visualization of drawing readiness, distribution, and access rights. Connect the right people with real-time information and the right tools—on one unified platform—to make better decisions faster.

"With DraftSight, we can do so much more than interface with our customers in DWG format. Because DraftSight and SOLIDWORKS are part of the same product family and are compatible, we can go back and forth between both systems. This is hugely important and enables us to optimize the use of 2D and 3D design tools."

—Bob Russell, Senior Design Engineer  
CentraSep Technologies

"DraftSight gives us the speed and flexibility that we need to handle 2D requirements easily and efficiently ... Plus, at such a low cost for each license, it's a lot more affordable to provide everyone with a seat of DraftSight."

—Mike Goad, President  
Innovative Manufacturing Services, Inc.
